Material must be installed by qualified people and the plant must be tested by an expert; according to regulations in force

Since 2012 software company and from 2016 electronic technology, today we have technological evolutions. The object you are holding in your hands right now is the fruit of a journey characterised by innovation, investments and passion which you have. Our system marks an important development with respect to hotel industry standards. Lux-M represents research solutions and advanced, hotel system needs ranging from small hotels to the large multinational hotel chains.

Our target is satisfied customer.

Why choose us

1. Because the system saves energy.

The system allows a more advanced consumption optimization thanks to room and common areas management according to their status.

2. Because we have a complete range of products.

Hotel management system, Room access control, Room temperature control, Mini bar control, SOS control, Control of maidens, Reception control, Light switch, Online control etc...

3. Because the customer recognized your logo and brand on each places. Different colours and customizations messages with logo and writings.

4. Because it is extremely easy to use.

5. For the total safety.

6. Because you can verify the room state remotely, Guest in-out, temperature, use minibar, window is open, SoS alarm , Alarm burglary.

7. To have always the situation under control.

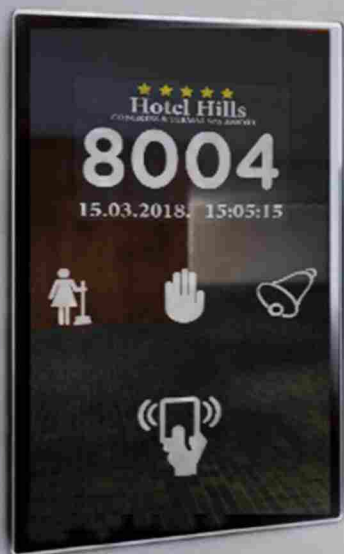

The system allows to control the room status when the guest is not present. If one door or one window is opened (or left opened by mistake) and the guest is not present, the system displays an alarm on the reception PC, this helps to prevent thefts and intrusions.

10. Because it is an innovative product.

11. To optimize staff costs. Staff will receive the indication about the rooms status, cleaning, end of used etc.

12. Because your hotel have last technology.

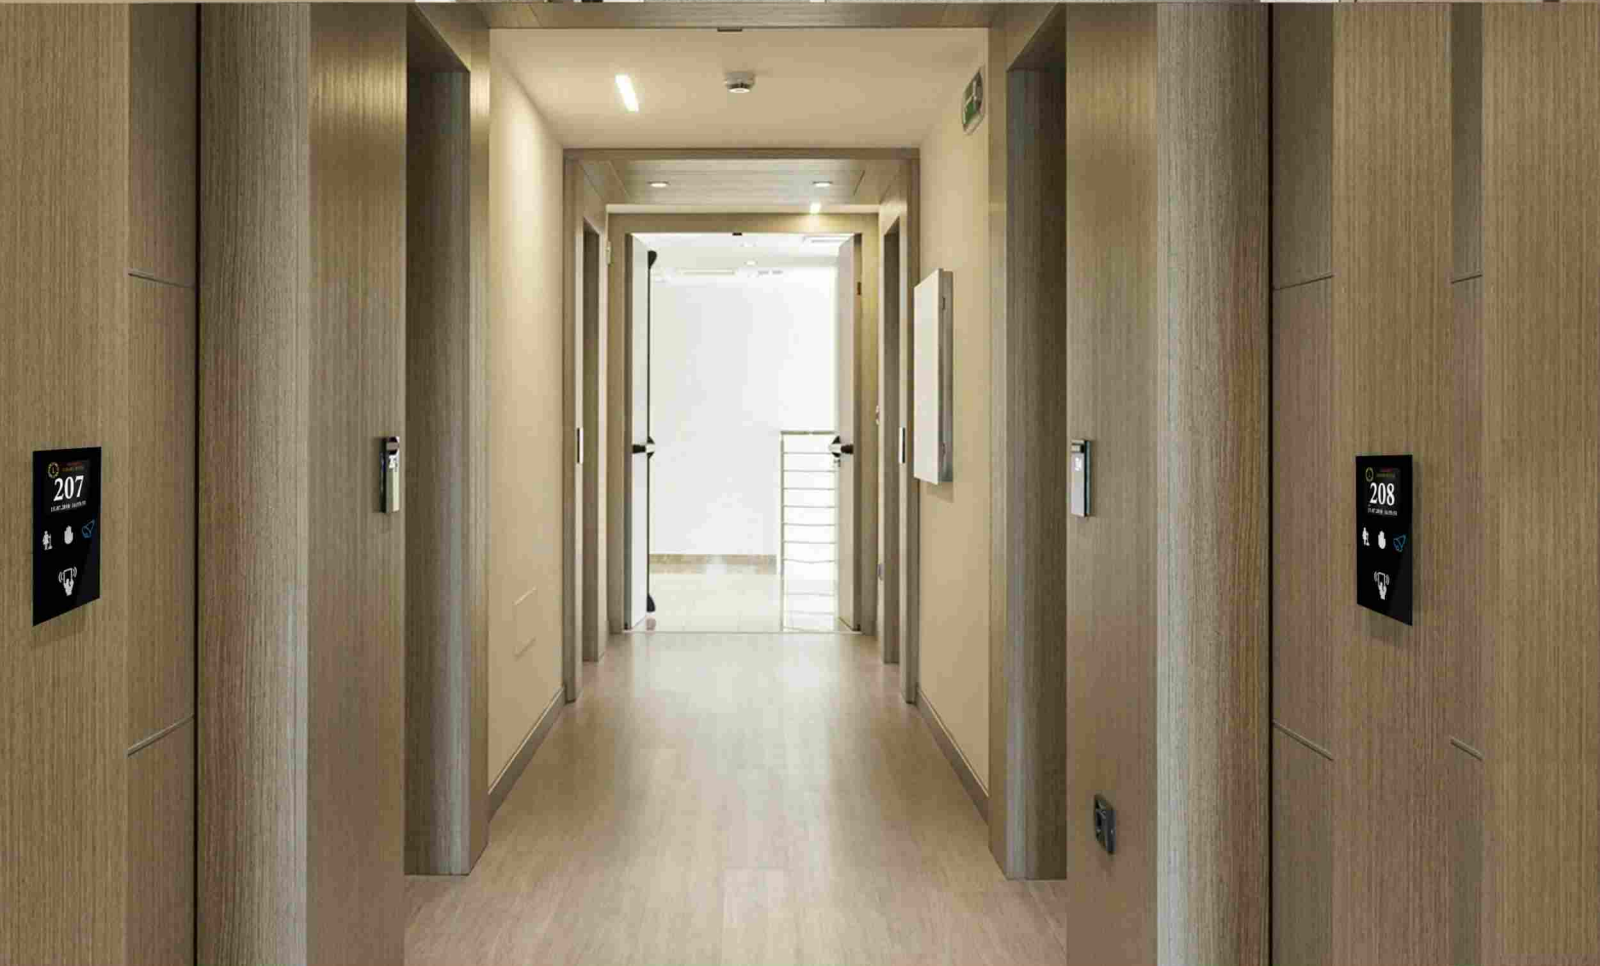

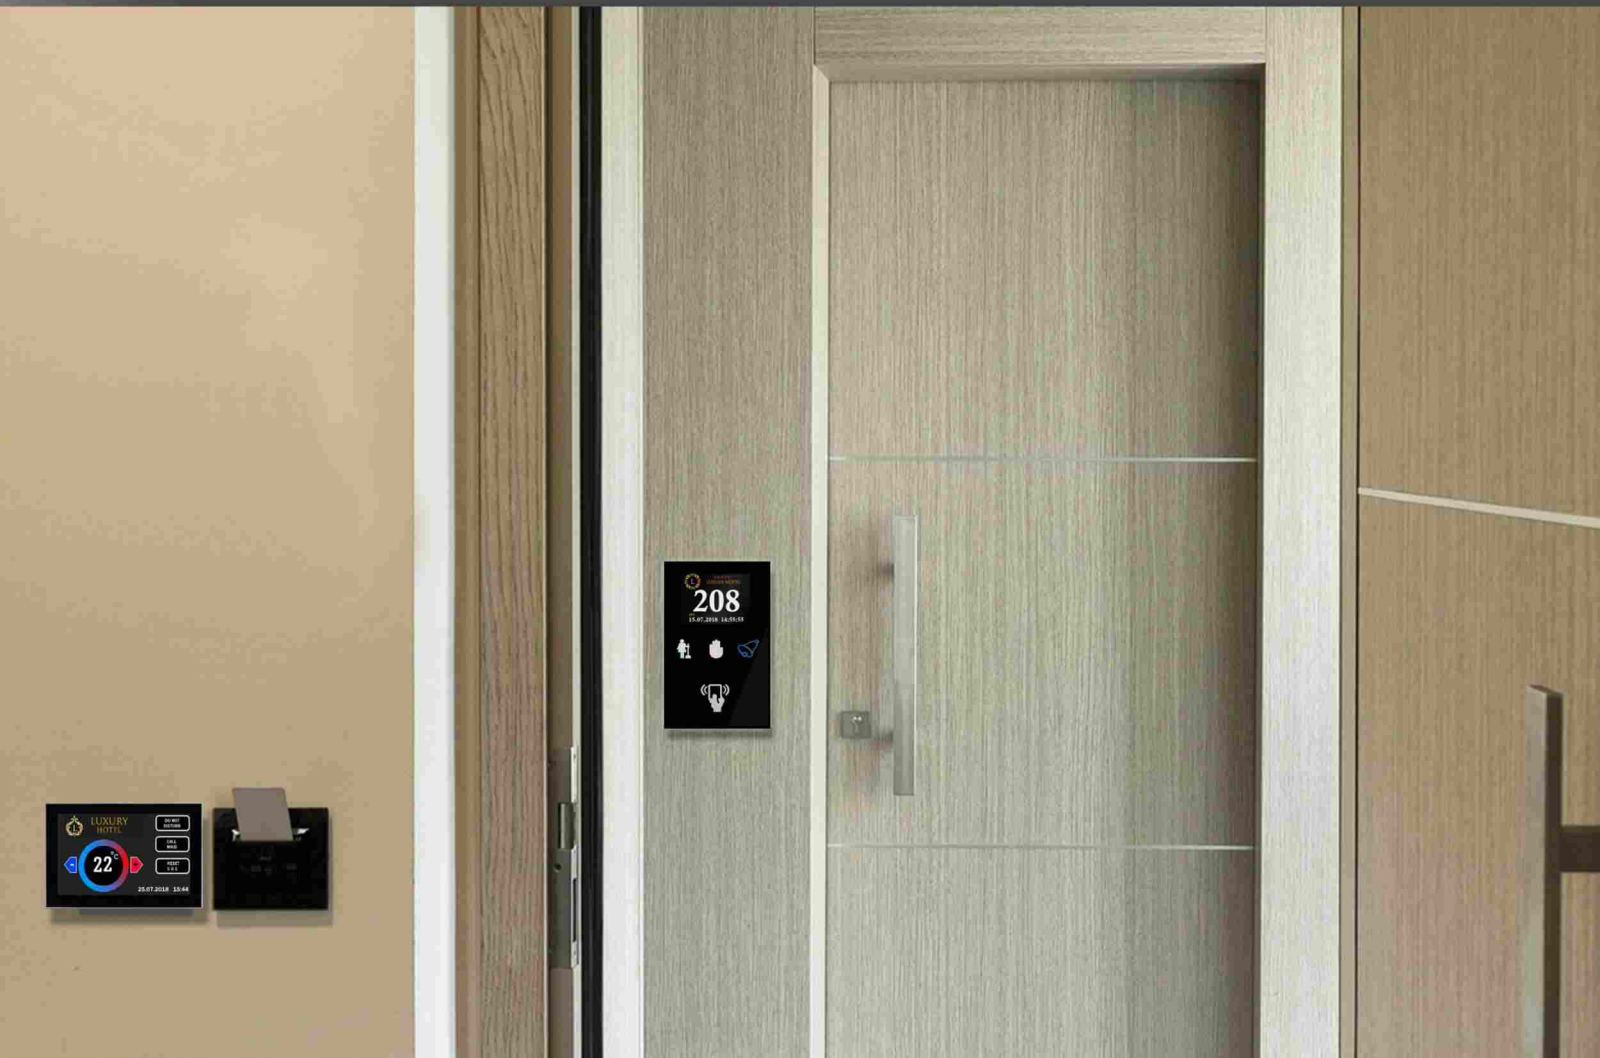

13. Your hotel will look more attractive with us.

ADVANTAGES FOR THE HOTEL

Reasons to choose a hotel Lux-M system:

1. To reduce management costs , better efficiency and save energy consumptions for , till 20-30%.
2. For safety of the whole structure. The automation system allows to reach very high security standards that can prevent thefts and intrusions.
3. Your guest will be impressed by luxury, quality and extreme efficiency and the hotel will acquire a sensible added value.
4. To have a system updated with the latest technologies
Nowadays the hotels that want to excel must offer something more to their guests.
5. The hotel system allows an immediate interface with all the devices, staff/guests control

Creative Solutions

Smart thermostat beautifies the ambience and regulates the temperature,
but the Lux-M series is much more...

The thermostat automatically adjusts the room temperature if the room is free, adjusts the temperature if the room is booked, saves energy if the window is open, the Lux-M series generates great energy savings..

The device can activate the option do not disturb, call a maid, reset sos, open the door, or get various hotel information.

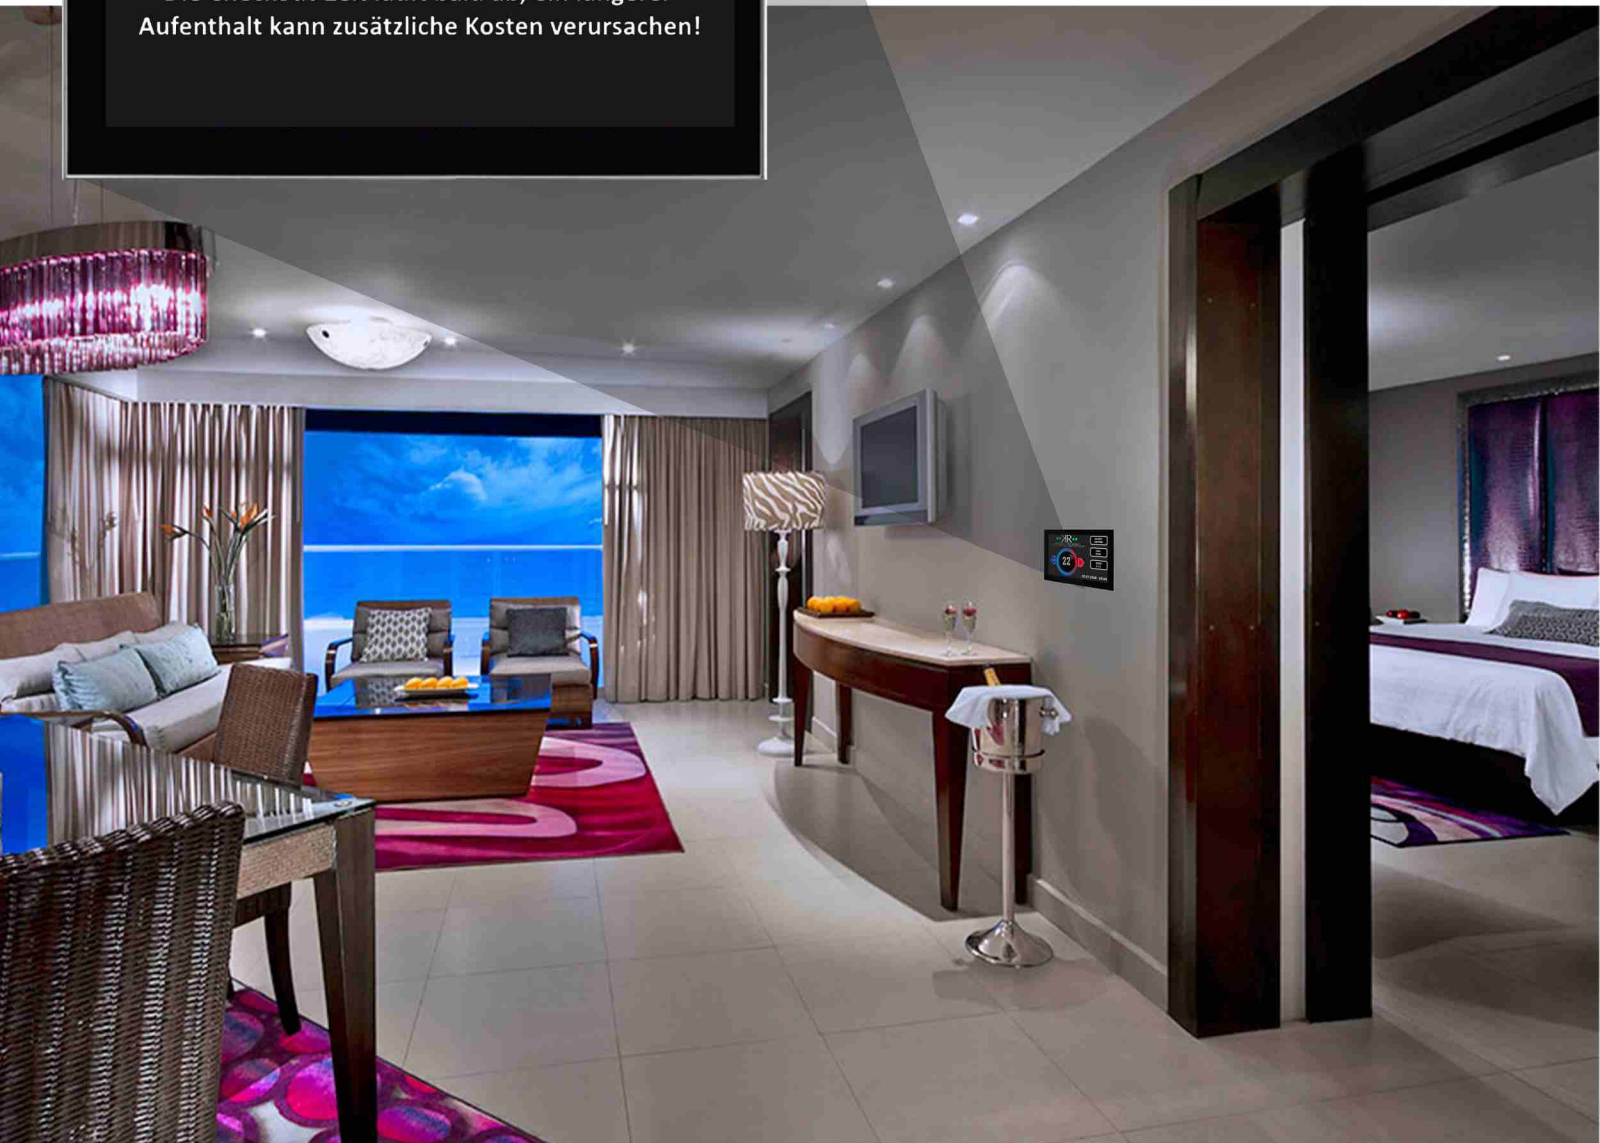

The Smart Lux-M series has an automatic message system.
If a guest is in the room at the time of check-out, the system will automatically alert him. Messages are in the native language of the guest. Messages are automatic and do not require staff time

LUXURY HOTEL

Checkout time will soon expire,
extended stay can create additional costs!

Die Checkout-Zeit läuft bald ab, ein längerer
Aufenthalt kann zusätzliche Kosten verursachen!

Works with almost all types of faincoilers

Our system has electronics for almost all types of faincoilers, buying faincoilers does not have to buy expensive controllers for control.

Energy saver switch which you can order in more colors. You can only activate the power supply with the RFID card. a quiet lighting help you can find a place for the card easier. after the guest leaving room the device interrupts power 15-30 seconds after, getting enough time to leave the room. Lorem Ipsum

Indication signs

with or without backlight

You save on installation

you need one cable from the collection point that passes by the device , from one device to second device etc. Power should be together or for each devices from room.

Before cabling, it's best to contact us for the optimal solution.

Our system saves your time and money
